

3 Simple Interactive Ideas

1. Move a Shape with the Keyboard

- Use the arrow keys or WASD to move one of the shapes around the screen.
- Basic code ideas: Input, x/y position variables, and Draw functions.
- Example: Press Left Arrow -> decrease X. Press Right Arrow -> increase X.

2. Click a Shape to Change It

- When the player clicks inside a shape, change its color, size, or position.
- Basic code ideas: mouse X/Y, mouse click input, if statements, and color variables.
- Example: Click the circle -> it changes color or moves to a random location.

3. Shape Collision Game

- Move one shape and try to touch or avoid the other shapes.
- Basic code ideas: position checks, if statements, score, and simple collision.
- Example: Touch a target shape -> +1 point. Touch a hazard shape -> lose a point.
